

Enabling Technologies Embossers

High-quality braille and graphics wirelessly and affordably

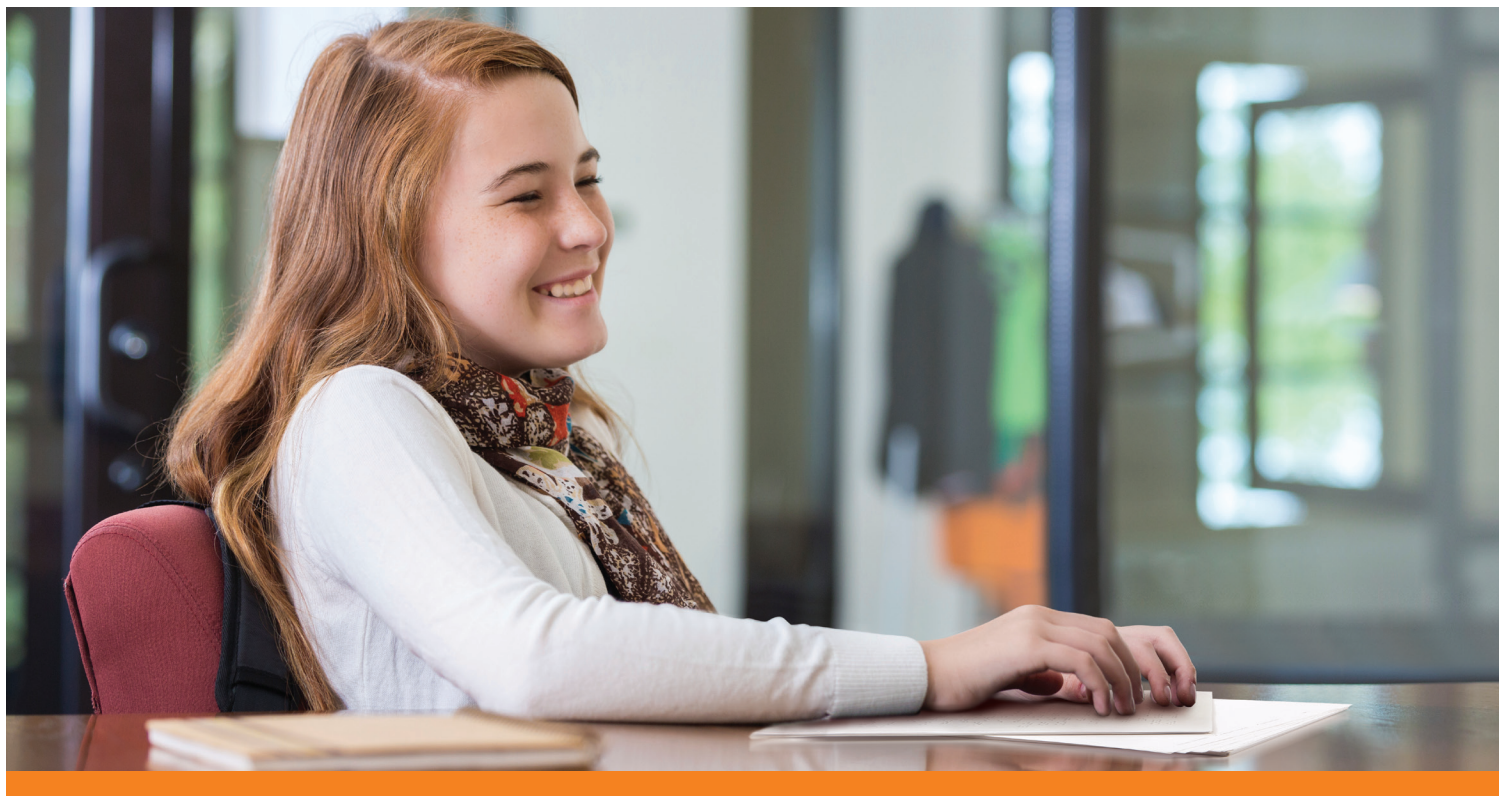

The next generation of braille embossers is here, and it's all grown up, performing beautifully in school, work, and home settings. The new Romeo and Juliet continue to maintain their reputation for providing high-quality braille, but they now have a new, modern platform.

see things. **differently.**

Romeo and Juliet have always been known as the easiest embossers to use

This new design maintains that ease of use, while also providing advanced features like tactile graphics and sideways printing for magazines and booklets.

The most convenient braille embossers on the market

You can send files from your iPad® or other mobile device using Bluetooth. With the built-in UEB (replacement for Grade 2) contracted braille translator and Firebird, Romeo and Juliet can support all your braille needs. Your students can even send files directly from HumanWare's BrailleNote™ Touch. It's one-step printing at its best!

Romeo embosses single-sided, while Juliet supports double-sided and interpoint braille.

Romeo and Juliet are the only braille printers that produce high-quality braille text and graphics over Wi-Fi and Bluetooth at an affordable price. With Romeo and Juliet, there is truly a happy ending!

Romeo 60

Romeo is the most powerful and portable single-sided braille embosser in the market. It can print 60 characters per second around the clock, for robust and reliable braille production.

Juliet 120

Juliet produces double-sided braille at 120 characters per second, for a real output of over 400 pages per hour, hour after hour, day after day.

Romeo & Juliet

Romeo and Juliet are such a devoted couple that they share many features and benefits. Both embossers have:

Unsurpassed braille quality, for easy and confident reading

Bluetooth and Wi-Fi enabled, so you can send files from just about anywhere – a computer, iPad or other iOS device, Android device, thumb drive, and more

Firebird tactile graphics software included, so you can handle all your brailleing needs in one device

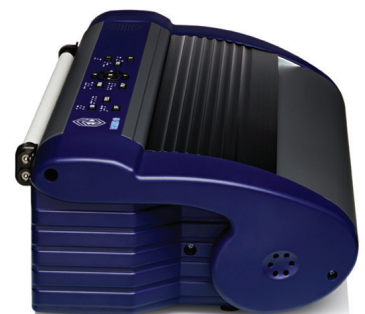

Sideways and booklet printing styles, so you can print newspapers and magazines and retaining formatting

UEB contracted braille translator built in, making it easy to produce braille documents quickly

Adjustable braille dot height for individual reading preferences

High quality multi-lingual speech, for an accessible user experience

Lighted control panel with speech and braille and tactile labels, making this embosser easy for both blind and sighted users

Tactile Graphics with Firebird

Now everyone can produce tactile graphics at an affordable price. Firebird extends Romeo and Juliet's ease of use, so anyone can produce graphics at 50 dpi. Just import files or draw what you need, and then print. It's that easy.

On the BrailleNote Touch, use KeyGraphics, our special graphical tool, to print images directly, without needing extra calibrations. In keeping with HumanWare's compatibility, this can be used by teachers or family members with the BrailleNote for quick drawings.
