ABOUT BRAILLO

BRAILLO ●

In January 1980, Braillo introduced the world's first double-sided (interpoint) braille embosser, the Braillo 270. The embosser was developed in collaboration with SINTEF, a research institute based in Trondheim, Norway, marking a significant advancement in braille production technology.

The first Braillo 270 was installed at the Tambartun School for the Blind in 1980, where it remained in operation until the school's closure in 2013. In 1986, Braillo expanded its product line with the Braillo 200, a compact interpoint embosser that became known for its reliability and consistent braille quality.

As production demands increased, Braillo continued to refine its technology. The Braillo 270 evolved into the Braillo 400 S, incorporating updated electronics and mechanical improvements to support higher output. Enhanced paper-handling options followed. The Braillo 400 SR introduced a roll feeder with an integrated cutter and stacker, while the Braillo 440 SW enabled four-page-per-sheet embossing to improve braille book production efficiency. This progression led to the Braillo 440 SF, the first fully automated braille book production system designed for on-demand publishing.

In 2016, American Thermoform Corporation acquired the company and modernized the product line. Mechanical and electrical enhancements increased embossing speeds by approximately 50 percent while maintaining the braille quality and durability for which Braillo is recognized.

Today, Braillo's embosser lineup includes the Braillo 300 S2, 450 S2, 600 S2, 400 CS2, 600 SR2, 650 SW2, and 650 SF2, offering production solutions for a range of operational needs. Since 1980, Braillo has supported braille literacy and the development of braille production facilities worldwide. The company provides workshops and training programs covering equipment operation, service, and full production center management.

While production of high-quality braille embossers remains the company's focus, Braillo also prioritizes tactile graphics. As part of American Thermoform, and alongside its sister company Zychem Limited, Braillo offers tactile graphics products, in addition to braille paper and labeling, offering a comprehensive range of accessibility solutions.

For decades, Braillo has set the standard in braille embosser construction and braille quality. Our mission is clear: to deliver the highest-quality production braille embossers and supplies, ensuring visually impaired individuals have access to exceptional braille materials. Choosing Braillo means more than acquiring a braille embosser—it means joining a dedicated team committed to advancing braille accessibility.

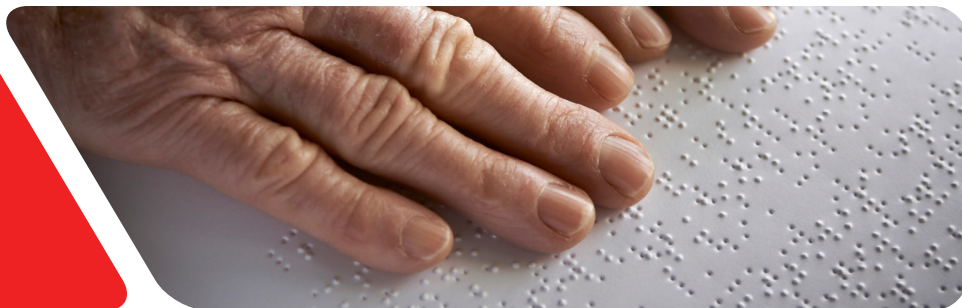

Quality Engineering, Performance Parts

True production braille requires embossers engineered with strong, durable components for sustained performance. Consumer-level and personal embossers rely on lightweight parts that often fail under production demands. Braillo embossers are designed for high performance and decades of reliable braille production. If an embosser is not designed for sustained production, it is not a production embosser. PRODUCTION
BRAILLE EMBOSSERS
CONTINUOUS PAPER

BRAILLO 300 S2

The affordable entry into production braille embossing

The Braillo 300 S2 is a highly reliable braille embosser, suitable for both light and heavy-volume production. Embossing at a speed of 300 CPS (900 pages per hour) on tractor-fed braille paper, it delivers exceptional dot quality and consistent performance. Its unique combination of speed, durability, reliability, and quiet operation has made the Braillo 300 S2 the preferred choice for schools for the visually impaired, correctional facilities, braille publishers, and large-scale braille production centers worldwide.

- Lowest priced true production braille embosser
- 300 CPS (900 pages per hour)
- Versatile solution for light- to high-volume production
- Designed for continuous operation
- Reliable, consistent performance

BRAILLO 450 S2

A high-speed production braille embosser perfect for businesses

The Braillo 450 S2 is designed for users who require higher braille output than the 300 S2, without the speed and scalability of the 600 S2. Built on the same reliable chassis as the 300 S2, the 450 S2 features upgraded internal components to ensure superior dot quality and consistency at higher embossing speeds. It is also the quietest Braillo embosser. Embossing at 450 CPS (1,350 pages per hour) on tractor-fed braille paper, the 450 S2 is trusted by braille producers worldwide and provides a high-speed, dependable solution to enhance your braille production capabilities.

- 450 CPS (1,350 pages per hour)
- Increased output for higher production demands
- Designed for continuous, high-volume operation
- Optimized for large-scale braille production
- Braillo's quietest embosser

BRAILLO 600 S2

The world's fastest desktop production embosser with the ability to scale

The Braillo 600 S2 is the fastest and most robust counterpart to the 450 S2, designed for high-volume braille production. Embossing at 600 CPS (1,800 pages per hour) on tractor-fed braille paper, it delivers exceptional dot quality and dependable performance at the highest speeds.

Known for its combination of speed, reliability, and quiet operation, the 600 S2 is used by many of the world's largest and most respected braille production facilities. Unique to this model, the 600 S2 is built on a chassis that can be upgraded to a Braillo 600 SR2, allowing your braille production capabilities to expand as your needs grow.

- Fastest desktop braille embosser
- 600 CPS (1,800 pages per hour)
- Maximum throughput for large-scale production
- Designed for continuous, high-volume operation
- Scalable to a Braillo 600 SR2 as production demands grow

Continuous Braille Paper Quantity Pricing

The speed and reliability of Braillo embossers often require large volumes of braille paper. We offer competitive pricing and volume discounts for high-usage customers. Learn more by visiting www.braillo.com/braille-paper or email us for pricing: sales@braillo.com

BRAILLO ACCESSORIES SCALE YOUR BRAILLE PRODUCTION

BRAILLO S2 STAND

The Braillo S2 Stand is specially designed to accommodate the full line of S2 embossers. Constructed from steel and equipped with wheels, it allows the embosser to be easily moved and securely locked in place during use. Doors on both sides provide ample storage space for braille paper, tools, and spare parts.

BRAILLO CUT

When it comes to cutting, trimming, or bursting braille paper, Braillo recommends the Braillo Cut, a "braille-modified" Muller forms cutter. The Braillo Cut provides an attractive, stand-alone solution for handling continuous braille paper, featuring a flexible and modular design. By removing perforations from all four sides of each page, it delivers a clean, professional finished product for your customers.

CUT SHEET PAPER

BRAILLO 400 CS2

The world's first and only production braille embosser using cut-sheet paper

The Braillo 400 CS2 is the world's first production braille embosser designed specifically for cut-sheet (single-sheet) braille paper. By combining production performance with sheet-fed flexibility, it enables high-speed embossing on individual sheets. With the introduction of the 400 CS2, Braillo now supports continuous, roll-fed, and cut-sheet braille production.

This embosser supports both two-page-per-sheet (front/back) and four-page-per-sheet (book, magazine, and newspaper) formats. It eliminates the need for continuous or roll paper while maintaining the performance, consistent braille output, and robust engineering expected from Braillo embossers.

- World's first true production sheet-fed embosser
- 400 CPS (1,200 pages per hour)
- Flexible two- and four-page-per-sheet formats
- Streamlined workflows with ready-to-bind output
- Proven Braillo reliability and consistent braille quality

Cut Sheet Braille Paper Quantity Pricing

PRODUCTION BRAILLE EMBOSSERS PAPER ROLLS

BRAILLO 600 SR2

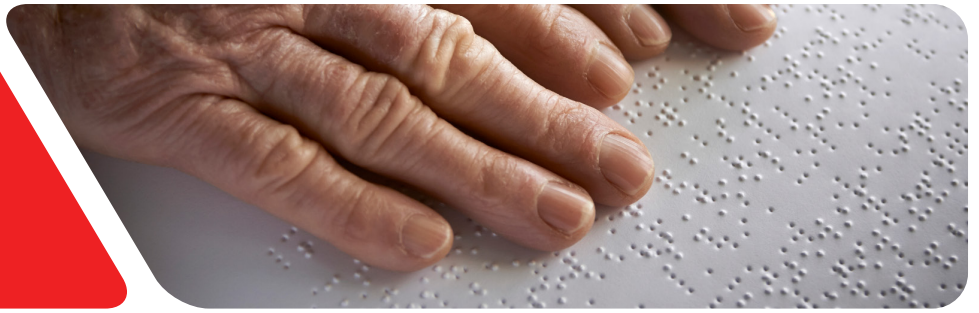

An embosser designed for high-speed production using paper rolls

The Braillo 600 SR2 braille embosser is designed for large-volume braille production. It embosses in a two-page-per-sheet format (front and back) and can hold up to 1,000 sheets (2,000 braille pages) in the stacker. Unique to this embosser is its use of braille paper rolls, which reduces paper costs and minimizes downtime associated with loading. Each roll can run for nearly eight hours, and embossed documents are separated by a blank sheet, making them easy to retrieve, organize, and bind.

- 600 CPS (1,800 pages per hour)
- Uses paper rolls for extended, uninterrupted production
- Reduced paper cost and increased efficiency
- Designed for continuous, large-scale operation

BRAILLO 650 SW2

A high-speed embosser for semi-automated braille book and magazine creation

The Braillo 650 SW2 braille embosser supports both two-page-per-sheet (front/back) and four-page-per-sheet (book/magazine) formats. Using braille paper in roll format, it is ideal for producing braille magazines, textbooks, and newspapers, while retaining the flexibility to emboss individual sheets as needed. When embossing in magazine format, a row of dots can be printed in the center of the page to facilitate folding. Each copy is also separated into signatures, making it easy to collect and bind according to your preferred method.

- 650 CPS (1,950 pages per hour)
- Maximum throughput for large-scale braille output
- Uses paper rolls for extended, uninterrupted operation
- Optimized for semi-automated book and magazine production

PRODUCTION BRAILLE EMBOSSERS PAPER ROLLS

BRAILLO 650 SF2

The industry's only production braille embosser for fully-automated book, magazine and newspaper creation

This heavy-duty embosser is ideal for creating both braille magazines and books – once these sheets are brailled, the embosser adds a cover, staples and then folds it. This is the fastest and easiest way to create a complete braille book or magazine – simply send the document to the embosser and out comes a finished book. The Braillo 650 SF2 makes “on-demand” braille publishing a reality.

- The only fully automated production embosser for books, magazines, and newspapers
- 650 CPS (1,950 pages per hour)
- Uses paper rolls for extended, uninterrupted operation
- Maximum throughput for large-scale braille output

OUR BRAILLE PAPER
QUALITY EVERY TIME

Highest Quality Braille Paper

As the largest supplier of production braille embossers worldwide, Braillo knows which paper works best and how to ensure consistently high-quality braille paper. Our paper meets the heavy demands of production braille embossing and is used in many of the world's largest braille production facilities. At the same time, it performs exceptionally well for smaller, personal-use embossers.

Why Leading Publishers Choose Our Braille Paper

CUT SHEET

- **Durable:** Allows braille dots to last longer.
- **Consistent:** Maintains uniform color, texture, and thickness order after order.
- **Embosser-friendly:** Reduces wear and tear on embossers.
- **Precision:** Continuous paper has clean perforations and hole punches.
- **Well-packaged:** Rolls are properly packaged and palletized.
- **Finished quality:** Pleasing to the touch and visually appealing.
- **Shipping expertise:** Experienced in all shipping options to ensure safe delivery.

Easy to Order, Fast to Ship

Simply call or email us for same-day quotes on all braille paper and shipping options. Standard high-quality paper is always in stock, and custom orders are processed quickly. We ship via air, sea, or truck freight, including pallets and containers. Continuous feed paper is shipped in specially designed triple-walled boxes, and rolls are wrapped in moisture-proof materials to prevent damage.

Trusted Suppliers for a Quality Product

When choosing braille paper, consider the mill, paper specifications, and processing.

- **Mill:** We work with a specific mill to ensure consistent, top-quality paper from order to order.
- **Specifications:** Our braille paper is acid-free, dust-free, and chlorine-free. It is formulated to precise thickness and weight for durable, correctly shaped braille dots.
- **Processing:** Rolls are wrapped for protection during shipment. Paper is converted from roll format to continuous feed or cut sheets using well-maintained perforation blades and punches. Continuous and cut sheet paper is processed through a vacuum system before packaging.

Braille Paper Pricing

We offer competitive pricing by managing production in-house, buying in bulk, maintaining strong supplier relationships, and listening to customer feedback. This ensures value without compromising quality.

Customizable Options

We offer fully customizable braille paper products, since all of our paper is processed in-house. We produce all standard sizes and punch options—Plain, 3-Hole, and 19-Hole—but we also have the capability to provide a wide variety of custom sizes and punches. Our high-quality paper is available in different weights and colors as well. While some custom orders may have minimum quantity requirements, please contact us to discuss your needs and explore available options. We will work with you to create individualized braille paper solutions that meet your exact specifications.

TRUSTED GLOBALLY

INDUSTRY LEADING WARRANTY

CHOOSE BRAILLO WHEN PERFORMANCE COUNTS

Braille publishers depend on continuous, high-speed production to deliver consistent, high-quality braille output. Reliable throughput drives efficiency and profitability. Braillo's true production braille embossers are engineered for sustained, high-volume performance. Braillo is the global standard in production braille.

Benefits of choosing Braillo for your braille production:

- Only manufacturer of true production braille embossers
- Built for continuous, heavy-duty operation
- Precise braille alignment—every time
- Compliant with braille authority standards
- Industry-leading 4-year comprehensive warranty
- Includes Duxbury Braille Translator

Braillo Stands Behind Our Embossers

Since 1980, Braillo has been dedicated to engineering the world's leading production braille embossers. Designed for speed, durability, and long-term performance, Braillo embossers deliver consistent, high-quality braille over extended periods of continuous operation. Combining industry-leading translation software, a comprehensive warranty, and premium braille paper, Braillo offers a complete production solution. When you invest in a Braillo embosser, you're choosing a system built to produce braille documents, books, and magazines reliably for decades—setting the standard in production braille embossing.

BRAILLO WARRANTIES

Braillo offers the industry's most comprehensive warranty. Our standard coverage includes all mechanical and electrical components for 3 years from delivery, or up to 8,000 hours (15,600,000 braille pages). When using Braillo / American Thermoform braille paper, the warranty extends to 4 years or up to 10,700 hours (20,800,000 braille pages). Braillo stands behind our braille embossers—no matter what.

SERVICE SUPPORT

Braillo supports your investment with comprehensive in-person, phone, and online assistance. From training programs and instructional resources to on-site and in-house service options, we provide the support every customer needs for long-term performance.

WHY BRAILLO
